TITLE: On certain questions of technical policy in the region of the operation of power systems. (O nekotorykh voprosakh tekhnicheskoy politiki v oblasti ekspluatatsii energosistem)

PERIODICAL: "Elektricheskie Stantsii" (Power Stations), 1957, Vol.28, No.4, pp. 41 - 44 (U.S.S.R.)

ABSTRACT: For many years, Soviet power engineering developed under particularly difficult conditions and the means available for installing reserve power capacity were limited. Therefore, special measures had to be taken to ensure reliable operation of power systems. These measures have followed two main directions: the introduction of prophylactic maintenance testing including high voltage testing of installations and regular repair work; the introduction of automatic systems intended to improve the reliability of the power system and also to suppress faults quickly. Equipment of this kind includes automatic field regulators and excitation forcing devices. Operating experience has shown that the measures adopted have been very effective and cheap, not only when there is an acute deficiency of power but also under normal conditions. Considerable benefits have resulted from improvements in the stability of parallel operation. However, at one time certain

1/4

104-4-12/40
specialists disapproved of the measures taken to improve stability of parallel operation, such as automatic field control and forcing, considering that it was dangerous for the equipment and that the best procedure was that of automatic unloading by voltage drop. The installation of excitation forcing amply justified itself in practice. The introduction of prophylactic maintenance repairs and testing greatly improved the reliability of the equipment.

The introduction of automatic equipment has of course certain negative features. The use of automatic reclosure can cause peaks of current and load and increases the number of operations of circuit breakers under fault conditions, and the equipment must be looked after. Because of these defects some power engineers think that automatic equipment and maintenance testing and repairs are unnecessary. Some engineers refer uncritically to the fact that such equipment is hardly used in the power systems of Western Europe. Some also suppose that these measures will only be necessary so long as there is a shortage of reserve power capacity.

2/4 These views require correction and attention should be drawn to the following circumstances. The relatively small

On certain questions of technical policy in the region of the operation of power systems. (Cont.)

104-4-12/40

number of system faults in the USSR in recent years is mainly a result of the extensive application of automatic equipment. Many years of operating experience has shown that the self-synchronisation method of switching does not damage electrical machines. It has also been demonstrated that automatic repeated reclosure and the high voltage testing of electrical equipment does not damage the equipment. In many foreign power systems the absence of system automatic equipment causes faults to develop extensively despite the presence of considerable reserves of power in both stations and systems. There can be no doubt that the cost of prophylactic repairs and testing is repaid many times over by a reduction in the cost of installation of reserve power. It should be noticed that power system automation is gradually beginning to be introduced in capitalist countries and so is prophylactic testing. However, foreign power engineers are not all of one opinion and this leads to slow introduction of advanced methods of working.

3/4 System automatics and prophylactic testing will not become less important with the increase of reserve power and the unification of power systems in the USSR. Indeed, with the unification of power systems in the sixth Five Year Plan and with

TITLE: Concerning the Paper of V.L. Smol'nikov "Overvoltages Resulting From Higher Harmonics" (Po povodu stat'i V.L. Smol'nikova "O perenapryazheniyakh ot vysshikh garmonik")

PERIODICAL: Energetik, 1958, Nr 6, p 5 (USSR)

ABSTRACT: A paper by Engineer V.L. Smol'nikov under the title "Overvoltages Resulting From Higher Harmonics", was published in the Nr 3, 1958 issue of this periodical. The author of subject article points out that Smol'nikov's conclusion is wrong, that transformer groups with open delta circuits are not to be switched on. Switching on of these transformers is permissible when it is performed from the 110 kv side under the condition that the neutral is grounded. Switching on from the 35 kv side is not permissible, since it may cause dangerous overvoltages. Since cases are very rare in which transformers will work with open delta circuits, it is not necessary to install coordinating spark gaps at the low voltage outlets. The aforementioned statements concern not only transformers with three windings but also those with two windings. A case where a transformer group workes with an open delta circuit is described in a paper written by the author, entitled

SOV/ 105-58-7-21/32

TITLE: Conference on Developmental Problems of the Production of Transformers in the USSR (Soveshchaniye po voprosam razvitiya otechestvennogo transformatorostroyeniya)

PERIODICAL: Elektrichestvo, 1958, Nr 7, pp. 82 - 83 (USSR)

ABSTRACT: The conference took place from March 5th to March 6th, 1958, in Moscow. It was called by State Scientific Technical Committee Attached to the Council of Ministers of the USSR (Gosudarstvennyy nauchno-tekhnicheskyy komitet Soveta Ministrov SSSR) together with the Gosplan USSR (Gosplan SSSR). This conference was attended by: scientists and engineers from Moscow, Leningrad, Kiyev, Khar'kov, Sverdlovsk, Alma-Ata, and other cities, representatives of the Sovnarkhozes, the Technical Office Attached to the Ministry of Electric Power Plants, of the Building Authorities RSFSR, of the Gosstroy USSR, of the Committee of Standards, of the Electric Installation Organisations, and by the co-workers of the transformer works Moscow, Zaporozh'ye, "Uralelektroapparat", Armelektrozavod, as well as by the All Union Scientific Research-and Planning Institutes VEI, VTI, GIDEP, VNIIChermet, VNIIE, MEI and

Card 1/3

Conference on the Developmental Problems of the
Production of Transformers in the USSR

SOV/105-58-7-21/32

others. The representatives of organisations which have transformers in operation were invited as well. Professor I.A. Syromyatnikov (GNTK SSSR) opened the conference and pointed out the shortcomings and objectives in the production of transformers. The Deputy Chief Constructor A.M. Chertin, Moscow Transformer Works imeni Kuybyshev (Moskovskiy transformatornyy zavod im. Kuybysheva) reported on the working out of plans for the new series of the 110 kW transformers in the case of which the total losses are lower by 30%, and the idling losses by 40% - 50%, compared with the GOST 401-41. In 1959 these transformers will be put in operation to a large degree. Chief Engineer I.A. Antonov, Zaporozh'ye Transformer Works (Zaporozhskiy transformatornyy zavod) reported on the new series of transformers with a power of 560 - 5600 kVA at 10 and 35 kV, 7,5 - 31,5 MVA at 35 kV, 90 - 240 MVA at 110 kV, 90 - 240 MVA at 220 kV, 15 - 60 MVA at 150 kV and on the series of autotransformers 220/110/HH with 120 - 300 MVA for monophasic units and 180 - 450 MVA for three-phase units. Chief Engineer A.N. Dolgov (Trust "Tsentronelektroset'stroy" MES) spoke about practical experience gained in assembling transformers and autotransformers with high power

TITLE:

Selection of Power Data for the Electrical Equipment and the Electric Drive in Consideration of the Power System

PERIODICAL:

Elektrichestvo, 1959, Nr 10, pp 1-8 (USSR)

ABSTRACT:

The author finds fault with the fact that clear data are not taken into account for the selection of the electrical equipment and the electric drive. The reliability and durability of the equipment, the consumption of active and reactive power per unit of the product to be made, the better efficiencies under otherwise equal conditions are frequently not considered because of departmental interests. For the same reason, equipments are manufactured on an insufficient scale and are not supplied to consumers. He points out that power installations and electrical equipment form the most important elements of the power system. Planning and determination of the optimum design of these equipments is to be based on the most favorable results for the National Economy. Methods of technical and economic calculation must be based on the period of service. If there are more than two variations possible, the minimum expenses must form the basis. The latter may be calculated according to

Card 1/2

Selection of Power Data for the Electrical Equipment SOV/105-59-10-1/25
and the Electric Drive in Consideration of the Power System

formulas (2) and (3) and price-lists. These aspects are illustrated here by the planning of alternators and electric motors, by the selection of reactive power sources and power transformers, and corresponding recommendations are given. There are 4 tables and 1 Soviet reference.

ABSTRACT

Professor M. M. Gikl'ovskii, Chilikin is Director of the Mechanics Department, Leningrad University, and the Head of the Mechanics Department of the Leningrad Institute of Lenin Institute of Power Engineering, and a specialist in the field of electric drive. Professor M. G. Chilikin wrote his dissertation for his application as Candidate of Technical Sciences in 1936, in 1951 he was appointed professor and in 1954 he obtained the degree of a Doctor of Technical Sciences. Since 1951 he has taught at the Leningrad "Electro-Physical" Academy, and is presently Professor of the Department of Electrical Engineering and the Department of MEI. He held lectures on electric drives and dealt with the construction of electric drive systems. In 1952 he became head of the aforementioned Institute. He issued ninety papers on teaching

Card 1/2

methods in scientific, on scientific problems of electric drives and electric machines. He is a senior research worker and university student. M. G. Chilikin is President of the Machine-Technicheskii Komitet, on avtomatizirovannoe elektropivod i primeneniye elekticheskikh mashin (Scientific and Technical Committee for Automated Electric Drives and the Use of Electrical Machines), President of the sotsialno-energo-voobrazovaniye Tekhnicheskoye Otdeleniye SSSR (Section for the Energy Education of the Technical Council of the Gosplan USSR), Member of the Scientific Council of the Gosenergoidol (State Power Engineering Publishing House), Member of the Editorial Board of the periodical "Elektricheskoye" (Electricity). He has made a large contribution to the planning of a rayon Committee of the CPSU, and four times delegate in the Komsomol (Komsomol Soviet). He received the Order of the Red Banner of Labor and other awards. There is 1 figure.

PERIODICAL: Elektrichestvo, 1960, No. 7, pp. 94-95

TEXT: This is a short biography of Viktor Ivanovich Ivanov born in April 1900 at Penza as the son of an engine driver. He is Doctor of Technical Sciences and Professor at the Leningradskiy elektrotekhnicheskiy institut im. Ul'yanova (Lenina) (Leningrad Electrotechnical Institute imeni Ul'yanov (Lenin)). He finished his secondary school education in 1918, and enrolled at the fiziko-matematicheskii fakul'tet Saratovskogo universiteta (Department of Physics and Mathematics at Saratov University), and in 1921 at the Leningrad Electrotechnical Institute imeni Ul'yanov (Lenin) from which he graduated in the special subject of electric power plants in 1927. He started his pedagogical activity at the same institute under the

supervision of A. A. Smurov in the same year, and conducted - at the same time - the investigations of protective relays at the Leningradskaya energosistema (Leningrad Power Network). Under the supervision of R. A. Lyuter and together with P. I. Ryzhov, he established a laboratory for protective relays at the same institute, and was among the first in the USSR to give lectures on protective relays and short-circuit currents. At the same time, he organized - at Lenenergo together with P. I. Ryzhov - the first service for protective relays in the USSR. His book on this field was published in 1932. From 1932 to 1941, he conducted the department of protective relays at the laboratory of A. A. Smurov. He developed a carrier-current protection for transmission lines, and under his supervision the laboratoriya im. Smurova (Laboratory imeni Smurov) installed 40 such sets at the Mosenergo, Lenenergo, Donbassenergo, and Uralenergo. During the first war years, he worked in the Ural, and besides, lectured at the Ural'skiy politekhnicheskii institut (Ural Polytechnic Institute) and the Lesotekhnicheskii institut (Forest Technology Institute). In 1944-47 he lectured at the Akademiya im. Zhukovskogo (Academy imeni Zhukovskiy) and the Moskovskiy aviatsionnyi institut im. Ordzhonikidze (Moscow Aviation Institute imeni Ordzhonikidze).

ABSTRACT: Brief biography of subject, a doctor of technical sciences and head of
Department of Electric Power and Automation in Industry at the Azineftekhim
(Azerbaijdzhan Petrochemical Institute), on the occasion of his 60th birthday in
October 1964. Graduating from Azerbaijdzhan Polytechnical Institute imeni
Azizbekov, subject worked in Caspian shipping industry and later headed the designing
division at the Azerbaijdzhan department of Elektroprom. With Azineftekhim since
1927, starting as laboratory assistant; department head since its formation in
1938; deputy dean of power engineering division in 1943-45. One of top Soviet
experts on the electric power supply and electrical equipment of the petroleum
industry, he has trained many engineers and scientists for this field and is the
author of over 60 published works and inventions. Widely known are his works on

determining power losses in drilling. He was the first to investigate the problem of selecting the most suitable power characteristics with due consideration for wave-like torque distribution along the drilling string. He did research on the automatic regulation of drill feed, critical roller-bit speeds, self-starting electrical pumps, etc. A party member since 1945, subject has been awarded the Order of the Red Banner of Labor. ABSTRACT: Professor V. S. TULIN was born in November 1904 and graduated from the Kharkov Engineering Institute in 1925. He has since then specialized in the application of electric drives for the mining industry, in low-voltage apparatus and more recently in automation. At the present time he is the chairman of the Department of Automation and Control Machinery at the Moscow Institute of Radio-Electronics and Mining Electromechanics. He has made major contributions in his field: he is the author of 80 published works including a textbook on the automation of production processes in the mining industry; he also received an award in 1948 in connection with the Donets Basin development. He now participates in ministerial councils and committees concerned with scientific-research work, industrial coordination, also secondary and higher education. Orig. art. has: 1 figure. [JPRS]

SOURCE: Elektrichestvo, no. 5, 1965, 90

TOPIC TAGS: electric engineering personnel, electric engineering

ABSTRACT: The article was written in honor of Lev Grazdanovich Mamikonyants on the occasion of his 50th birthday and upon his completion of 30 years of scientific and industrial activity. He graduated from the Azerbaydzhan Industrial Institute in 1938, whereupon he worked at the Central Industrial Research Laboratory of Azonergo first as Electrical Engineer and then as Chief Engineer. His scientific activity begun during the student years at the university laboratories for electrical machinery and high-voltage techniques. From 1941 to 1945 he served in the Soviet Army and became a member of the Communist Party in 1942. Since 1945 he has been working with the VNIIE (All-Soviet Scientific Research Institute of Electric Power) at the State Industrial Commission on Power and Electrification of the USSR, in charge of the Electrical Machinery Laboratory now and also as head of the Department of Electrical Machinery, Insulation and Automation. Since 1953 he has also been the Vice-Director of the Institute of Scientific Affairs. He received the degree of Doctor of

Engineering Sciences in 1959 and was appointed Professor in 1961. Much theoretical and practical work has been done under his leadership at the Electrical Machinery Laboratory which he helped to set up. Problems concerning the theory of synchronous machines leading to their improved operation were worked out here (asynchronous condition after loss of excitation, simplified method of compensator starting, self-synchronization of generators, etc.). L. G. Mamikonyants is also active in scientific research coordinating committees on power and electrification in the USSR. He sits also on the Committee for the Determination of Electrical Equipment Parameters and on the Joint Scientific Council of the Moscow Power Institute. Furthermore, he is on the editorial board of Elektrichestvo. During his entire career he has published about 60 works, many of them resulting from basic research. At the Moscow Power Institute he taught a course on "Special Problems in Electric Power Stations" from 1952 to 1954 and on "Testing of Synchronous Machines" from 1953 to 1954. The texts of his lectures were printed in the form of a compendium. He is very effective in training the young generation of students and assisting them in earning their degrees. L. G. Mamikonyants participates in the activities of the VNIIE both as recruiter and as lecturer. Orig. art. has: 1 figure. [JPRS]

TOPIC TAGS: electric engineering personnel, metallurgic furnace, electric equipment

ABSTRACT: Nikolay Afanas'yevich Tishchenko completed the Khar'kov Electrotechnical Institute in 1930, after working as an electrician in a Metallurgical plant from 1923-1926. He was active in the development of domestically produced electrical equipment for rolling mills and metallurgical furnace works. He was active during WWII in restoring electrical equipment damaged by the Germans. After the war, he was active in developing electrical drive equipment for both domestic and foreign metallurgical plants. He has been active in scientific work, publishing over 45 works in such varied fields as electric drives, equipment reliability and productivity of labor. Orig. art. has: 1 figure. [JPRS]

ABSTRACT: In 1929, G. M. Kayalov completed the electrotechnical department of the Mechanical Faculty of the Novocherkassk Polytechnical Institute. Until 1947, he worked in the planning department of the Rostov Division of the All-Union Electrotechnical Union. In this time, he rose to the position of Chief Engineer. He directed the planning of a large number of important pieces of electrical equipment for various projects. He was active in the postwar restoration of many important industrial enterprises. He is the author of almost 70 published works, and has made a great contribution to modern, scientifically based methods of design and analysis of electrical loads for industrial equipment. He is on a number of commissions and in many scientific and technical societies. Orig. art. has: 1 figure. [JPRS]

ABSTRACT: The chief specialist of transformer building of the Gosplan (State Planning Commission) USSR, Samuil Isaakovich Rabinovich was born in 1905 in the town of Borisoglebsk of the Voronezh Oblast'. From his student years at the Gosudarstvennyy elektromashinostroitel'nyy institut (State Machine-Building Institute) he already showed interest for power transformers. In the early thirties he designed the first types of domestic Soviet 110 and 220 kV transformers; in 1939 he became the chief designer of the Moskovskiy transformatornyy zavod (Moscow Transformer factory). In 1946, he conducted the design and construction of lightning-resistant transformers; during 1949-1954,

TITLE: Lev Veniaminovich Litvak (on the occasion of his 60th birthday)

SOURCE: Promyshlennaya energetika, no. 9, 1965, 43

TOPIC TAGS: electric engineering personnel, electric power engineering

ABSTRACT: The noted specialist of industrial power production, Candidate of Technical Sciences, Docent of the Correspondence Power Institute Lev Veniaminovich LITVAK began his engineering activity at the Moscow Association of State Electric Stations in 1929. Later he became one of the coauthors of all the "Directives for the increase of the power factor" issued in 1954, 1955, and 1961. He published 70 scientific papers. For his successful activities in defense industries during World War II he was decorated by "Znak Pocheta." After the war he concentrated on scientific-pedagogical work and in recent years worked actively in

TITLE: Honoring the 60th birthday of Aleksandr Dmitriyevich Romanov

SOURCE: Elektricheskkiye stantsii, no. 11, 1965, 94

TOPIC TAGS: electric power plant, industrial personnel

ABSTRACT: In July 1965 A. D. Romanov celebrated his 60th birthday and the 35th anniversary of his active life as a major designer, operator, and builder of electric power stations. On his graduation in 1927 from the Moscow College of Engineering, Aleksandr Dmitriyevich joined the Mosenergo Moscow Power System where he steadily rose through the ranks until he became Deputy Chief Engineer, while at the same time participating in the design and practical introduction of 500-kV electric transmission lines running from Moscow to Volzhskaya Hydroelectric Power Station and from Kuybyshev to the Urals. Since 1959 A. D. Romanov has been Chief Engineer at the Glavvostozelektrosot'stroy Main Administration for Power Grid Construction in Eastern USSR of the Card 1/2

State Production Committee for Energetics and Electrification USSR. Along with his active work, since 1930 A. D. Romanov has been teaching courses in Power Networks and Systems as well as in Power Stations and Substations at the Moscow Correspondence Institute of Energetics and, later, at the All-Union Correspondence Institute of Energetics, and, in this capacity, has trained new cadres of power engineers. In 1957 the title of Assistant Professor was conferred on him and in 1963, the title of Candidate of Technical Sciences. He has published more than 40 scientific and technical articles on power engineering and construction and he is a member of the editorial boards of the periodic anthologies Energeticheskoye Stroitel'stvo (Power Construction) and Energeticheskoye Stroitel'stvo za Rubezhom (Power Construction Abroad). He has been a Party member since 1932 and is the bearer of the Order of Labor Red Banner as well as of various medals. Best wishes for further creative work are extended to him. TITLE: The use of the 660-volt power standard in the national economy

SOURCE: Elektrichestvo, no. 6, 1966, 12-17

TOPIC TAGS: electric power production, economic program, power supply, electric power transmission

ABSTRACT: The article discusses the problems and transitions required in connection with the broad industrial use of 660-V power system, scheduled for introduction in the Soviet national economy. Economic gains and operational advantages to be derived from the switch-over to 660 V are discussed, necessary technical modifications in specific equipment types (transformers, electric motors, power plants, illumination equipment, etc.) are briefly reviewed, and network diagrams and representative circuitries are analyzed. The authors point out that the use of the 660-V system would result in considerably fewer losses of electric power in medium-output motors, trunk feed systems, and power distribution networks. The unit power of shop and plant transformer equipment is increased, and the number of high-voltage substations and radial lines is reduced. In addition, there is an increase in the upper limit of motor power. The execution of the 660-V power system requires 1.5 to 2 times fewer
